

PATIENT MANAGEMENT SYSTEM

A presentation by:

- Manas Lathkar
- Pratik Turaga

CliniCare

- CliniCare is an easy and accessible method for doctors and health institutions to store patient data locally.
- With high reliability, easy accessibility and a simple to use UI, CliniCare aims to bring the convenience of technology so that it can be used by anyone.

WHY CliniCare?

- CliniCare addresses a need for improvement in technologies across clinics in underprivileged areas
- It is a safe, secure, efficient alternative and is easy-to-use.
- CliniCare also allows clinics to cut down on usage of paper.
- It thus cuts down all the risks of bad management of patient data that include privacy safety risks, data loss, missed diagnoses, etc.

PROS AND CONS OF CLINICARE

PROS

The application provides easy access to patient records.

The patient data is secure and accessible only by the practitioner.

The chances of the patient data being lost or permanently destroyed is extremely low.

It is convenient to use and is a very affordable option for all.

CONS

This is currently only limited to smaller clinics of general practitioners, and not major, big-scale hospitals.

Healthcare providers and staff may resist the transition from familiar manual processes to digital systems.

FUTURE SCOPE

- Rural and suburban clinics: Being the primary market, CliniCare provides much needed digital solution for managing patient records in areas with limited access to proper health care.
- Medical camps and mobile clinics: CliniCare can be utilised by camps and other outreach initiatives to manage patient data and provide better care to distant and underserved communities.
- Pharmacies: CliniCare can help with patient data management and medication records in places where pharmacies offer basic healthcare services.
- Non-profits and NGOs: CliniCare can make data management and record-keeping easier in volunteer healthcare services in rural and underdeveloped areas.
- Nursing homes: In these situations, CliniCare can be used to manage residents' medical information and enhance the standard of care given.

PROBLEM STATEMENT

- Many local clinics across rural and suburban areas generally maintain patient records in physical form such as books and files. Many complications can arise such as loss or damage of patient records.
- While written data may not be as reliable, it is also not an efficient way to store in large number. As the number of records may increase, so would the unnecessary use of resources like paper, space, time, etc.
- The problem of data security, ineffectual healthcare systems, poor disaster recovery and time-inefficiency of maintaining physical records can be overcome by the following solution.

KEY NUMBERS

Approximately,

86% of medical visits in India are from individuals living in rural areas, with a majority travelling over 100 km to reach available healthcare facilities.*

And, nearly

90% of the population in rural and suburban areas in India is not covered by insurance.*

*Source: <https://balladbrief.byu.edu/>

IDEA/APPROACH DETAILS

CliniCare is an apt solution for the said problem. It is an easy and accessible method for doctors to store the patient data locally. It addresses a need for improvement in technologies across clinics in underprivileged areas, and better treatment of patients' information. It also contains the following added features:

01.

Accessibility

Accessibility features in the app have been added so it is easy-to-use for everyone.

02.

Telemedicine integration

Patients can upload their prescription on the app and will be notified in advance when a stock refill is needed

03.

Patient Care

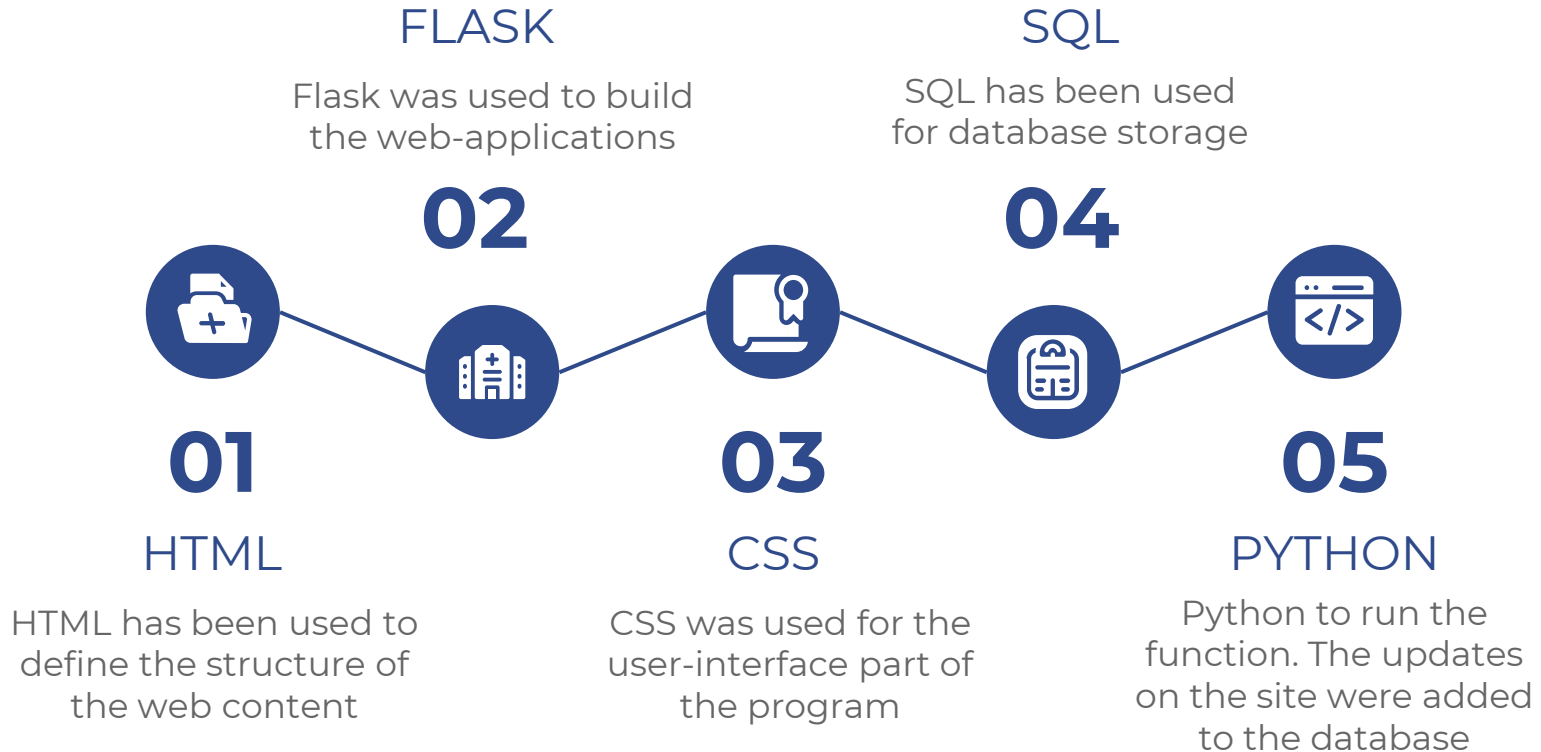

Patient data is constantly reviewed for trend changes, appointment-scheduling and prescriptions

04.

Financial aid

A renewed billing model is created where we integrate with external institutions like insurance providers, pharmacy outlets for better workflow.

TECHNOLOGY STACK

NOVELTY & FUTURE SCOPE

- Market Expansion: As the advancing digitization of healthcare continues to grow, the need of efficient data management grows with it. CliniCare can be used not only in rural and suburban areas but eventually in major hospitals and larger clinics.
- Mobile apps: Developing applications for CliniCare can make it more accessible and convenient for healthcare providers and users.
- AI and machine learning for predictive analytics and decision support to assist healthcare providers in diagnosis.
- Government healthcare initiatives create potential collaborations with larger healthcare programs.

According to Rural Health Statistics, 2021-22

Table 8.

Notes: The representation is calculated using the proportional method on the basis of rural population estimates for the year 2022.

All India sample is derived by using sampling frame of census (covering the whole country) in terms of the area.

State level data population for the year 2022 estimated based on the percentage of rural population in the State or Union Territory.

R: Required; P: In Particular; S: Shortfall; * Surplus

Notes: Telangana came in existence in 2014 after bifurcation of Andhra Pradesh

Jammu & Kashmir and Ladakh bifurcated and became UTs during Aug 2019.

Delhi & Nagar Haveli and Daman Diu merged as single UT during Jan 2020

Description: The given two tabular graphs showcase the total number of SCs, PHCs, CHCs in rural areas and the "Shortfall in health facilities in rural areas in mid-2022". This highlights why a more efficient, digitalized infrastructural alternative like ClineCare is required, despite arbitrary technological advances

According to Rural Health Statistics, 2021-22

Graph 5. Shortfall of Specialists at CHCs

Graph 6. Doctors & Paramedical staff at Sub Divisional/ Sub District Hospitals

Description: The given two bar graphs indicate the shortfall of specialists at CHCs and doctors and paramedics at sub-district hospitals. The data has been derived from Rural Health Statistics for the year 2021-22 on January 12, 2023 by the Ministry of Health and Family Welfare, Govt. of India.

CONCLUSION

CliniCare is an easy-to-use, effective patient database where users can access telemedicine facilities, data security and patient care at its finest. Especially beneficial for those in rural and sub-urban areas, CliniCare strives to be a sustainable and resourceful alternative to the conventional manual process of data entry.

THANK YOU!
